

Installing Replacement Spring Plates

Most outdoor furniture swivel chairs use two fiberglass spring plates to allow the chair to rock back and forth. Over time the fiberglass spring plates eventually weaken through use resulting in a loss of resiliency and eventually breakage. If you find that your outdoor swivel chair has too much rocking action it may be time to replace the fiber glass spring plates on the swivel base of your patio chairs. It will take 5 minutes or less to replace each spring plate.

Remove the Old Plates.....	2
Install the new spring plates	3

Remove the Old Plates

1. Before beginning take a picture of your chair for reference.
2. Remove the spring plates from your chair. You will need two wrenches, one to hold the bolt and the other to spin the nut.

It is very important to keep all original hardware that has been removed from your chair as they will be needed for the installation of the new spring plates.

Install the new spring plates

1. Use the original hardware to install the new spring plates. Take care to put the washers back in place to prevent the new spring plate from cracking during use.
2. Tighten the spring plates with the two wrenches. Take care not to over tighten and crack the new spring plate
